Data are based on a sample and are subject to sampling variability. The degree of uncertainty for an estimate arising from sampling variability is represented through the use of a margin of error. The value shown here is the 90 percent provide and of the stimate plus the margin of error (the lower and upper confidence bounds) contains the true value. In addition to sampling variability, the ACS estimates are subject to nonsampling error in or treesented these.

Name of the service data are not available for the cluster of the operation of the second back. Telephone service data are not available for certain geographic areas due to problems with data collection of this question that occurred in 2015 and 2016. Both ACS 1-year and ACS 5-year files were affected. It may take several years in the ACS 5-year files until the estimates are available for the geographic areas affected.

affected. While the 2012 2016 American Community Survey (ACS) data generally reflect the February 2013 Office of Management and Budget (OMB) definitions of metropolitan and micropolitan statistical areas; in certain instances the names, codes, and boundaries of the principal cities shown in ACS tables may differ from the OMB definitions due to differences in the effective dates of the geographic entities.

ONE deminions due b differences in the effective dates of the geographic entities.
Estimates of urban and rural aveas form the ACS do not necessarily reflect the results of ongoing urbanization.

Explanation of Symbols:
1. An¹¹¹ entry in the margin of error column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical lest is not appropriate.
2. An¹² entry in the estimate column indicates that either no sample observations or too few sample observations were available to compute a standard error and thus the margin of error. A statistical lest is not appropriate.
3. An ¹⁴ following a median estimate means the median falls in the lowest interval or upper interval of an open-ended distribution.
4. An ¹⁴ + following a median estimate means the median falls in the lowest interval or an open-ended distribution.
5. An¹¹¹ entry in the margin of error column indicates that the distribution.
5. An¹¹¹ entry in the margin of error column indicates that the stantales is controlled. A statistical lest for sampling variability is not appropriate.
6. An ¹¹¹ entry in the margin of error column indicates that due to trib elevant interval of an open-ended distribution.
5. An¹¹¹ entry in the estimate of an open-ended distribution.
5. An¹¹¹ entry in the margin of error column indicates that due that median data for this geographic areas cannot be classed to trib appropriate.
6. An ¹¹¹ we find the estimate is not appropriate interval data for this geographic areas cannot be distribution.
7. An Werk the the estimate data falls in the lowest interval of an open-ended distribution.
7. An Werk the the estimate data falls in the lowest interval of an open-ended distribution.
7. An Werk the the estimate data falls in the lowest interval of an open-ended distribution.
7. An Werk the the testimate is not applicable on tot available tor
