In looking at my notes, I had two questions for f/u, one from Cook and Ali.

1) The number of warning letters to date = 387. The number of notices of violation to date = 142.

This means 63% have registered with just the warning letter as a prompt. The remainder needed the NOV. None had to progress further.

2) The NFPA offers the greatest number of translated fire safety materials in Spanish. They also offer a few in other languages (Somali, German, French, Hmong and Haitian Creole). We're getting translation estimates.
