

Fee Look-up

Learn more about how the stormwater service charge is calculated and look-up what your charges will be. Make note that with the stormwater charge comes a corresponding reduction in your sewer charges.

Without a Stormwater Service Charge the Sewer Charge would be \$9.70 per HCF.

New Stormwater Service Charge - \$6.00 per month/1,200 sf of impervious area

Adjusted Sewer Charges - \$8.20 per HCF

Calculating Your Stormwater Service Charge

Residents and businesses will have a stormwater service charge calculated from the actual square feet (sf) of roof and pavement area on their property. For each individual property in the city the actual roof and pavement area is calculated from aerial photographs. That area is then rounded to the nearest 1,200 sf. That rounded whole number is how many units a resident or business will be billed for every month.

For example: an average house has 2,200 sf of roof and pavement area: 2,200 rounded to the nearest 1,200 is 2. For this example: 2 units x \$6.00 = \$12.00 per month.

400-1799 sf IA
\$6.00
per month

1800 - 2999 sf IA
\$12.00
per month

3000 - 4199 sf IA
\$18.00 per month

Note: 1st year service charge shown here as an example. Larger properties pay more in increments of 1,200 sf base unit.

Exemptions

There are some exceptions:

- Properties with less than 400 sf of pavement or roof area will not be charge.
- Public roads and public sidewalks or paths will not be charged.
- Railroad tracks will not be charged.
- With the exception of Peaks Island (which will be charged) all other islands will not be charged this fee.

All other properties will be charged. Whether you are a non-profit or a private home or business or government agency, you will be charged this fee.

On-Line Rate Calculator

Using this [on-line calculator](#) you can find out how much roof and pavement area the city has on record for your property. Also, by having your Portland Water District bill ready, you can also calculate how much your new total sewer and stormwater charges will be after the new stormwater service charge is implemented. **Note:** sewer fees will be reduced with the implementation of the stormwater fee.
